

### *Product Introduction:*

This machine is independently designed and developed by the company. We are the true factory of KOYO brand mechanical products, dedicated to serving the African market and have been cooperating with multiple customers for about 20 years.

This machine adopts a PLC controller and automatic cursor positioning (or photoelectric control device or photoelectric tube monitoring), and can produce 2000 bags per hour. It can be adjusted to fill small bags of 70 to 500ml and uses a heat sealing system to ensure that the filled small bags will not leak water. It is designed to automatically complete bag making, filling, sealing, printing, cutting, and counting using PE film or composite film bags with or without pre printed marks.

### *Packaging Materials:*

This machine uses the following materials: LDPE HDPE/LDPE/LLDPE/PE 100% raw resin, environmentally friendly ink.

The main appearance is a roll of transparent film, white, black, and black-and-white film

Adopting back sealing ensures that the product meets national hygiene standards.

It is widely applied to the filling of such liquid materials as drinks, juice, milk, soya-bean milk, peanut milk, soy sauce, vinegar, yellow rice wine, edible oil and etc. With the elegant bag shape, the bags are in good taste with firm sealing. And after sterilization, the products' shelf life can be up to one to three months. Therefore this packer is your first choice for liquid materials.

## *Looking Forward To Cooperation:*

We are proud to offer a product that has stood the test of time and continues to deliver exceptional results. Whether you're a new customer exploring packaging solutions or a returning client looking to upgrade your equipment, We all welcome you to experience this product, it will definitely provide you with a good cooperative experience, Don't miss the opportunity to enhance your packaging process with a machine that has already earned the trust of so many.

*If you purchase our machine, we can make the following guarantees*

1. We can dispatch engineers to provide on-site installation and debugging, and ensure that your company's employees can learn to operate the machine on their own
2. We will provide you with corresponding parts at the same time of shipment, so that you can replace them later
3. We can also provide remote technical support in the later stage, and if there are any technical problems, we will solve them for you as soon as possible
4. If you have requirements for packaging speed, width of packaging bags, and other technical parameters, we can design a liquid packaging machine that meets your needs according to your requirements
